TRAINEE SOFTWARE ENGINEER

About Wordery

Wordery is a fast growing global online book retailer.

Based in Farnborough, Hampshire, Wordery was founded in October 2012 by a team of bookselling eCommerce entrepreneurs in partnership with Bertrams, one of the UK's largest book wholesalers.

With sales doubling annually since inception, Wordery is a significantly successful story in the start-up world.

Wordery sells a range of over 10 million books over to over 100 countries via 10 channels, and is one of the top booksellers in the UK.

Our dedicated D2C channel, wordery.com, launched in October 2013 and is now a substantial part of the business and the key area of focus and growth.

The Role

Business Operations are a multi-disciplinary team made up of developers, analysts, and systems experts. This role is integral to this team through its purpose of producing clean, scalable and maintainable code in order to maintain current activity and support the growth of our bespoke eCommerce platform.

Responsibilities:

- Monitor, maintain and improve BAU systems and processes (i.e. our vast inventory and pricing management system).
- Creating new systems to support business priorities and growth plans
- Write clean well designed code
- Produce detailed specifications and contribute in all phases of the development lifecycle to support system developments
- Troubleshoot, test and maintain the core product software and databases to ensure strong optimization and functionality
- Support the creation and provision of data
- Undertake business and market analysis to support the development of current and new systems
- Manage the technical infrastructure and architecture associated with current and new systems
- Provide 2nd/3rd line 24x7 technical support
- Follow internal compliance and security requirements
- Follow industry best practice
- Support the Business Operations multi-disciplinary team with projects as identified

Essential Skills and Experience:

- IT graduate or similar demonstrable skill level
- Transferrable software engineering experience, specifically in Object Oriented principles.
- Software engineering in an OO language such as PHP, Java, or C#

Desirable Skills and Experience:

- PHP Experience
- Linux systems administration
- Networks
- MongoDh
- Elasticsearch

Personal Attributes:

- Commercial awareness
- Enthusiastic
- Curious
- Engaged
- Innovative
- Team player
